

# **DVS DATA SCIENCE with PYTHON Content**

**Introduction:** This course provides techniques for data cleaning, visualizing the data, predictive modeling, machine learning and deep learning by using python, tensor flow and keras

**Duration:** 2.5 Months long instructor- led pure class room training

## **Features:**

- Main focus on hands-on training
- Guidance in Resume Preparation
- Contains real world business problems and examples.
- Rich material and handouts for reference
- FAQs, Real Time Scenarios, Real Time Interview Questions

## **After Completion of this training:**

- Build predictive models using linear, logistic regression and decision trees
- Build machine learning models using Decision trees Neural nets, SVM and Random forest
- Build reinforcement models using the Markov chain models
- Build deep learning models using CNN, RNN and DNN

## **Statistics concepts:**

### **1. Statistics terminology**

- Basics Statistics:
- Descriptive statistics and inferential statistics
- Measure of central tendency -Mean, Median and Mode
- Measure of Dispersion-Range, Variance, standard deviation and coefficient of variation
- Frequency distribution
- Introduction to Probability
- Practice Session & Assignments

## 2. Python Introduction

- What is Python & History?
- Installing Python & Python Environment
- Basic commands in Python
- Data Types & Operators
- Data Structures in python- List, tuples, dictionary and sets
- Python packages - math, Numpy, pandas, Matplotlib, seaborn, scikit learn
- Loops- for loop do while
- User Defined Functions
- My First Python Program
- Conditional statements- IF, IF-Else, nested IF, nested IF-Else conditional
- Lambda, map, filter and reduce
- LAB Session

## 3. Data Handling and Data manipulation

- Data importing
- Working with datasets
- Manipulating the data sets
- Subset the data
- Sort the data
- Creating new variables
- Bins creation
- Identifying & removing duplicates
- Exporting the datasets into external files
- Data Merging
- Pivot table analysis
- Data visualization through matplotlib, seaborn
- Histogram
- Bar Plot
- Pie Chart
- Scatter Matrix Pandas
- Scatter matrix Violin
- Plots
- Line Graphs

## 4. Python Basic Statistics

- Taking a random sample from data
- Descriptive statistics
- Central Tendency
- Variance
- Quartiles
- Percentiles
- Box Plots
- Graphs
- Visualization case study with poke man data

## 5. Pyspark

- Install Spark with Python
- Loading the data into spark
- RDD
- RDD to Data frame
- Introduction to Spark-MLIB

## 6. Probability distribution

### Discrete distribution:

- Bi-nominal distribution
- Poisson distribution
- Hyper geometric probability distribution
- Multinomial distribution

### Continuous distribution:

- Normal distribution
- Uniform normal distribution
- T-student distribution
- Exponential distribution
- Chi- squaredistribution
- F- distribution
- Box cox distribution

## 7. Sampling Techniques:

1. Random sampling:
  - Sample with replacement
  - Sample without replacement
  - Training, testing and hold out dataset
2. Stratified sampling
3. Sequential or systematical sampling
4. Clustering sampling techniques

## 8. Hypothesis testing:

- What is Hypothesis testing
- Need of hypothesis testing
- Null hypothesis testing
- Alternative hypothesis testing
- Use case to solve the hypothesis testing

## 9. Data preprocessing

- Data sanity checks
- Anomalies detection
- Missing Value detections & treatments
- **Outliers detection and outlier's treatment**
  - Boxplot
  - QQ-plot
  - IQR method
  - Variable transformation techniques
  - Exploratory Data Analysis
  - Uni-variate analysis
  - Bi-variate analysis
  - Multi-variate analysis
  - EDA Analysis with HR domain

## 10. Python Data Handling and EDA analysis by using Telecom data project

- Project on Data handling
- Data exploration
- Data validation
- Missing values identification
- Outliers Identification
- Data Cleaning

- Basic Descriptive statistics
- EDA analysis
- Generating the insights
- Presentating the insights

## 11. **Varaible Reduction Techniques**

- Correlation
  - Pearson correlation
  - Rank Correlation
- VIF/Multi collinearity
- PCA
- Factor analysis
- Chi-Square Technique
- Information value
- Cluster based method
- Tree based method
- Lasso regression method
- Stepwise regression method

## **Machine learning**

### **Supervised learning -Regression**

- Linear Regression
- Multiple linear Regression
- Rigid Regression
- Lasso Regression
- Elastic Net Regression
- Polynomial Regression
- Time series Analysis:
- Need of time series
- Moving average method
- Holt-winter method
- ARIMA method
- Model Evolution metrics
- Use case with Regression models-Project and Assignments

### **Supervised learning -Classification**

- Logistic Regression
- Decision Tree
- Decision Tree Regressors

- Decision Tree Classifier
- Naive Bayes
- KNN
- KNN-Regressors
- KNN-Classifiers- Binary labels and multi labels
- Support Vector Machines
- Support vectors-Regressors
- Support vectors-Classifiers
- Ensemble learning
- Bagging
- Boosting
- Random Forest
- Random Forest -Regressor
- Random Forest-Classifier
- Extra Tree Network
- Model Elevation metrics

## Un supervised learning

- a. Clustering Analysis
  - Hierarchical Clustering  
Agglomerative Clustering
  - Non-Hierarchical Clustering  
K-Means
- b. Market Basket Analysis

## Reinforcement learning

- Markov chain- Loan prediction
- Value prediction problems for stock market data

## Model Selection and Cross validation

- How to validate a model?
- What is a best model?
- Types of data
- Types of errors
- The problem of over fitting
- The problem of under fitting
- Bias Variance Tradeoff
- Cross validation
- Boot strapping

# Neural Networks

- Neural Networks Introduction
- Neural network Intuition
- Neural network and vocabulary
- Neural network algorithm
- Math behind neural network algorithm
- Building the neural networks
- Validating the neural network model
- Neural network applications
- Image recognition using neural networks

## NLP-Natural Language Processing:

- What is Text mining
- Corpus
- Tokenizer
- POS
- Named Entry recognizers
- Lemmatization
- NLTK
- Text cleaning
- Words Cleaning
- Stop words
- Cleaning Twitter Data
- Sentimental Analysis
- Text blob
- Word2Vec
- Spelling correction
- TFIDF
- Use Case with Text mining Analysis

## Deep learning

1. Overview of Deep learning by using keras and Tensorflow
2. Tensorflow
  - Introduction to Tensorflow
  - Constant
  - Place holders
  - Variables

### 3. Multi layers Neural Networks

- Neurons
- Weights
- Activations
- Networks of Neurons
- Training Networks
- Back propagation
- Gradient Descent

### 4. RNN

- Language modeling and generating text
- Machine translation
- Speech recognition
- Generating image description

### 5. CNN

- Feature learning
  - 1.convolution
  - 2.pooling
- Classification learning
- Flatten
- Fully Connected
- SoftMax

### 6. DNN

### 7. Digit recognizer Classification

### 8. Image processing using OpenCV

### 9. Noisy erodes using open cv

### 10. Image text analysis by using Open CV

### 11. Recommendation engine

- Item based
- Collaborative filtering method

## Final Project-Python

- Business understanding-Credit cards and Telecom
- Data requirement
- Data cleaning
- EDA and insight generation
- Variable creation
- Variable reduction
- Model Building
- Validation Building
- Recommendation to clients
